

1. Reverse a string without slicing:

>> "Hello World"

ANSWER: s="Hello World"

print(s)

s[::-1]

2. Count words in a sentence:

>> "A Quick Brown Fox Jump Over the Lazy Dog"

ANSWER: s = ("A Quick Brown Fox Jump Over the Lazy Dog")

print("len(s)")

40

3. Remove duplicate characters.

>> "Carrot"

Answer: data=("Carrot") if

4. What is difference between lists and sets?

ANSWER: List | Sets

A list contains square bracket[] | A set contains curly bracket{}

5. Can sets contain lists? If Yes How If no why?

ANSWER: No, As list is not hashable.

6. Why sets are faster?

ANSWER: Sets are faster because they are built using a data structure called a Hash Table.

7. Difference between remove () and discard ()

ANSWER: Remove | Discard

Removes a particular element | Same as Remove but does not show error on empty cell

8. How many methods to insert elements in the list? Total Method?

ANSWER: append() :- add elements one by one

insert() :- add elements specifically

extend() :- add many elements

9. How many methods to delete elements in the lists? Total Method?

ANSWER: Pop

Delete

Remove

Discard

Clear

pop(n)

✓

①

10. How many Operators in Python Write their name in Explain?

ANSWER: 7 operators

Arithmetic operators

Assignment operators

Logical operators

Membership operators

Mathamatical operators

✓
✓
✓
✓
✓

Identity

①

11. Write precedence Rule of arithmetic in Python?

ANSWER: 1.+

2.()

3.-

4./

5.*

✓
X

12. How to sort elements in list using slicing method?

>> [5,11,14,7,8,3,2,5,9]

ANSWER: num = [5,11,14,7,8,3,2,5,9]

num = sort.num

print ("num")

num.sort()

13. What is Dictionary?

①

ANSWER: A Dictionary in python is used to store data in a form of key-value.

14. How many methods to create dictionary?

ANSWER: key must be unique

using bracket

key

value

items

dict()
{ }

15. How many methods to access value in dictionary?

ANSWER: Using Key
Using Get()

16. How many methods to delete elements in dictionary?

ANSWER: Pop
Clear
Delete
Popitem

17. How to perform mathematical operations in sets write method name?

ANSWER: using specific built in

18. What is packing variable in tuple? Explain using example?

ANSWER: Tuple packing means to store multiple data in a Tuple
E.X :- data = ("jo Ram,27.9,India")
print("data")

19. What is unpacking variables in tuple? Explain using example?

ANSWER: Tuple unpacking means to separate data in a Tuple

E.X:- name,marks,country=data

print("name")

print("marks")

print("country")

20. Difference between sets and dictionary?

ANSWER: set | dictionary

A set contains curly brackets {}
data in a form of key-value.

A Dictionary in python is used to store
